PREFACE.

THE following Tables are got up to enable Merchants to mark their goods for sale at any required rate of Profit on the Invoiced Price.

The principal business now done in Canada is done in Decimal Currency. We find, however, that some houses still adhere to Halifax Currency. To meet this, the author has given in the first column Halifax Currency, and in the second column Halifax Currency reduced to Dollars and Cents; so that either can be taken as Invoiced Price.

In making the calculations, one-quarter cent, half-cent, and three-quarter cent, is looked upon as near enough to show the fractional part of that coin.

GUIDE TO THEIR USE.

TO ADD THE REQUIRED PROFIT TO INVOICED PRICE.

Look to the rate per cent., and in the first or second column—the Invoiced Price. The sum in a line therewith, in the third column, will be the amount with profit added.

TO ASCERTAIN THE NETT COST OF AN ARTICLE ON WHICH DISCOUNT IS ALLOWED.

Find the rate, and Invoiced Price as before, and the nett cost is given in the fourth column.

TO ADD THE REQUIRED PROFIT PER CENT. TO THE NETT COST OF AN ARTICLE WHEN DISCOUNT IS ALLOWED ON INVOICED PRICE.

Refer to the Table giving the rate of discount allowed. Find the Invoiced Price as before, and in the same line

in the fourth column is shown the nett price. Then take the required percentage of profit on that nett price.

EXAMPLE.

The Invoiced Price of Tweed is 70c. per yard, which we propose to sell at 17½ per cent. profit. Refer to the page giving that rate of percentage, find the cost price in second column, and by looking at the same line in the third column, the price to be asked is 82c.

The Invoiced Price of Shirting is 15c. per yard, subject to a discount of 7½ per cent. Refer to the Table giving that rate, find 15c. in the Invoiced Priced column, and in a line with that in the fourth column the nett cost will be 13¾c.
